EXPERIENCE

Staff Software Engineer

April 2024 - present

Axon Inc, NYC

- Leading the design, development, and implementation of features for the Axon Records Management System (RMS), utilizing technologies such as Go, Kafka, MySQL, GraphQL, and Elasticsearch.
- Migrating the task workflow to Elasticsearch, focusing on noisy neighbor mitigation, index speed improvements, and index status tracking.

Staff Software Engineer, Search Backend

September 2020- February 2024

eBay Inc, NYC

- Developed efficient algorithms compatible with existing Search Infrastructure that process several terabytes of data utilizing proven algorithmic ideas and concepts in classification, text, mining, and information retrieval using technologies like Java, Scala, Kafka, Spark, PostgreSQL, and Airflow.
- Led the Great Price and Best Selling features which had direct visibility on the site and increased the average conversion rate by 14% on the Search Result page. These badges are updated on eBay items in near real-time using factors such as sales history, search impressions, and engagement.
- Designed and implemented Rapid Feature Management to enrich the training data for our machine-learning models. This improves the time to develop and release new features on the ranking model to production by 60%.

Principal Software Engineer, Data Preparation

August 2017- September 2020

Dell Boomi, San Francisco, CA

- Worked on the data preparation platform and developed ETL solutions for enterprise customers using technologies like Scala, Akka, Spark, Python, and PostgreSQL.
- Developed a parser to parse structured and semi-structured data like XML, JSON, and CSV files and represent them in a flattened, tabular structure that can be easily saved in columnar format.
- Designed and implemented a real-time data pipeline to process semi-structured data by integrating 150 million raw records from different sources using Apache Kafka to stream data and utilized the Spark job server.

Software Development Engineer

April 2016 - June 2017

Informatica Corporation, Redwood City, CA

- Implemented dynamic target creator for Informatica mapping designer that transforms source data and stores them in a flat file, Amazon Redshift, relational, and Salesforce databases without requiring the target syntax.
- Optimized performance for data grids with over >100,000 records using temporary tables, materialized views, and processed records in subsets when applying filters and user permissions.

Senior Software Engineer

July 2011 - August 2014

Parametric Technology Corporation

- Redesigned old architecture pages to spring framework and developed features like drill-down, advanced filters, tags, and decorators for data grids and chart APIs resulting in improved efficiency and reusability.
- Led the development task for Approval Workflow and Pricing strategies for BMW by contributing to the design, development, and testing phases.
